Inventivee Harvest funding proposal

US$10,000 business working capital request

Prepared for BancABC Zimbabwe
15 September 2026

Funding request

Inventivee Harvest requests a US$10,000 working capital facility to support a government Christmas-decoration tender opportunity in December 2026 and initial stock for a new retail shop intended to begin trading by January 2027. The proposal uses trading records from Kipasa Branch and Dub Dub Outlet to demonstrate existing activity and frame repayment. Nirvana is the financial recording system.

We propose a 12-month facility with separately controlled tender and new-shop stock allocations. The tender allocation would be released against a confirmed award or purchase order, an accepted cost budget and a documented payment schedule. The stock allocation would be paid against supplier quotations and a confirmed opening plan. All terms remain subject to BancABC assessment.

Proposed facility	Request
Borrower	Inventivee Harvest; exact registered name and legal form to be verified
Amount and currency	US$10,000
Purpose	Government Christmas decorations and new-shop opening stock
Proposed allocation	US$6,000 tender / US$4,000 stock; planning split for management confirmation
Timing	Tender delivery in December 2026; shop trading by January 2027
Tenor and repayments	12 months; monthly principal and interest; tender receipt sweep if agreed
Evidence	Kipasa and Dub Dub records; legal ownership and cash availability to be documented

Credit case in brief

The two outlets recorded US$85,013.84 in tax-inclusive sales from March to August 2026, averaging US$14,168.97 per month. Sales before the tax amounts recorded in the system averaged US$12,268.67. These are transaction records, not audited financial statements or bank-confirmed collections. [S1]

The request is for consideration and structuring. Tender award status, contract value, payment terms, security and the complete borrower cash-flow position are still to be confirmed. The illustrations below deliberately give no repayment credit to tender receipts or new-shop sales.

Business and trading evidence

Management identifies Kipasa and Dub Dub as the existing operating shops supporting this request. Recorded items include jewellery, gifts, wrapping paper, balloons and general retail merchandise. Product records support a retail trading profile; they do not establish prior government tender experience. Inventivee Harvest should attach proof that it owns or has lawful access to the cash flows of both outlets. [S1, M1]

2026 month	Kipasa gross	Dub Dub gross	Combined gross	Before recorded tax
March	4,337.50	9,221.00	13,558.50	11,739.93
April	4,457.35	8,606.30	13,063.65	11,311.41
May	5,331.85	8,762.34	14,094.19	12,204.01
June	6,159.50	8,686.00	14,845.50	12,854.58
July	4,409.96	11,223.54	15,633.50	13,536.81
August	4,285.00	9,533.50	13,818.50	11,965.29
Total	28,981.16	56,032.68	85,013.84	73,612.03

Amounts in US dollars as used in the existing reporting convention; confirm source currency against bank statements. Gross means total_with_tax; before recorded tax means total_before_tax. No statutory tax rate has been inferred. Minor cent differences arise from transaction rounding. [S1]

Trading continuity and concentration

March through August is the common six-month period with records for both shops. Dub Dub contributes 65.9% of combined gross sales in that period. August combined gross sales were US$13,818.50, 6.9% below June. No December seasonal uplift is assumed. January and February records have substantially fewer entries and require completeness checks before use as a seasonal benchmark. September is incomplete and excluded from the forecast baseline. [S1]

The extraction contains 5,872 sale rows and 2,676 shop-ledger rows for the selected shops within the requested date window. Soft-deleted sales are excluded from the totals. The latest recorded sale is 14 September 2026. Missing periods are not treated as zero trading. Source records alone do not establish 12 months of operating history. [S1]

Collection evidence

Of the March–August gross sales, US$84,376.84 was marked cash and US$637.00 EcoCash. These payment labels support a predominantly cash retail model, but require reconciliation to daily cash counts, mobile-money statements and bank deposits. Loan monitoring should use actual collections rather than sales alone. [S1]

Use of funds and delivery plan

The US$6,000 / US$4,000 allocation below is a proposed planning split, not a supplier quotation or a management-approved budget. Replace it with supported costs before submission. Funding must stay within the US$10,000 approved limit; any extra requirement needs a separately evidenced source.

Allocation	US$	Purpose and release condition
December tender	6,000	Christmas-decoration procurement and direct fulfilment costs. Release only after award, specifications, quotations, delivery acceptance requirements and payment terms are confirmed.
January shop stock	4,000	Initial saleable inventory, including quoted landed costs. Order sufficiently early for January opening; pay suppliers directly where feasible.
Total	10,000	Fees, fit-out, deposits and cost overruns require separate funding or a revised allocation.

Government Christmas-decoration tender

Management identifies the customer as government. The procuring entity, tender reference, award status, contract price, deposit, invoice due date and payment history have not been supplied. The bank should assess the actual counterparty and contract. A government customer does not make the tender an awarded contract or guarantee prompt payment. [M1]

Before drawing: attach the tender or award document; bill of quantities; supplier quotations; delivery timetable; tender margin after all direct costs, taxes, transport and finance costs; and evidence of how acceptance and invoicing will be completed. Confirm any bid or performance security requirements and whether these need a separate bank instrument.

Proposed control: direct any tender deposit and subsequent receipts to the agreed BancABC collection account. An agreed sweep would repay the tender sub-allocation and accrued charges first, subject to statutory obligations and bank terms. No claim is made that assignment of receivables or a guarantee is already available.

New retail shop

Opening target: January 2027. Management should confirm the location, lease, product mix, stock quantities, opening date, staffing and launch budget. Separate the US$4,000 initial stock order from rent deposit, fittings, licences and other setup costs. Use demand and sell-through evidence from the existing shops when selecting products. [M1]

The repayment illustration allows US$500 per month for incremental new-shop costs from January, with no new-shop revenue. This is a sensitivity assumption, not an established operating budget. Any additional setup or recurring cost must be included in the final forecast before commitment.

Financial interpretation and proposed controls

Existing profit reports need reconciliation

Reported operating result	May 2026	June 2026
Kipasa	-692.04	-57.61
Dub Dub	2,841.45	1,715.49

These are the legacy report outputs, not adjusted earnings or verified debt-service cash flow. The generating script uses tax-inclusive sales and estimates cost of sales from inventory costs; it excludes central Operations activity. Dub Dub shows no separately classified salary expense. Daily till openings must not be accumulated into a bankable cash balance. Reconcile tax treatment, payroll, purchases, central costs, drawings and actual closing cash before using profit or balance-sheet conclusions. [S2]

The July Operations report records US$33,980 in Dub Dub savings and black-box transfers during January–July. It also records pooled Operations uses, including US$17,737 labelled stock orders, and adjustment-looking entries. The report explicitly says these pooled uses cannot all be attributed to individual Dub Dub transfers. The US$33,980 is not added to revenue, profit, security or available cash. [S3]

Controls proposed for the facility

Maintain separate records for tender spending, new-shop stock and normal retail operations. Match each disbursement to a quotation, payment record and receipt of goods. Reconcile till cash, EcoCash and bank movements daily; review stock and gross margin monthly. Eliminate transfers between the shops and central accounts when preparing consolidated cash flow.

For the loan period, the illustration assumes no owner drawings or discretionary transfers. Any actual drawings must reduce repayment cash in the final forecast. Prioritise statutory payments and loan instalments, and obtain approval before diverting funds to another outlet or purpose. These are proposed controls requiring management adoption, not claims about current practice.

Security and legal borrower

No collateral or guarantee has been evidenced. Provide the asset and liability statements of the owners, ownership documents, existing encumbrances and details of security proposed to BancABC. Do not represent retail stock or government receivables as accepted security until the bank has assessed them. Document the relationship between Inventivee Harvest and the two trading shops.

Twelve month repayment illustration

This is a conditional planning case, not a forecast certified by management or a BancABC quotation. Period: December 2026 to November 2027. It assumes US$10,000 is advanced in December, US$6,000 tender spending occurs in December and US$4,000 opening stock is purchased in January. Earlier procurement requires earlier approval and a revised schedule.

Input	Illustrative assumption
Existing shop collections	US$12,268.67 monthly before recorded sales tax; March–August average, no growth
Stock replenishment	50% of sales before recorded tax, paid in the same month
Existing shop operating costs	US$4,000 monthly; planning allowance, not verified total spending
Other cash reserve	US$300 monthly for cash tax and maintenance; not a calculated tax liability
New shop incremental costs	US$500 monthly from January; zero new-shop sales included
Other flows	No tender receipts, owner drawings or existing debt service included; confirm actual obligations
Loan terms	24% nominal annual interest, monthly reducing balance; 12 equal principal instalments
Opening unrestricted cash	US$0; no unverified savings or till balance counted

Revenue is assumed to be collected in the same month. The 50% stock allowance is a cash replenishment assumption; it is not verified historical cost of sales. Receivables, supplier credit, VAT settlement differences and inventory timing need separate reconciliation. Loan fees and insurance are excluded because no quote is available. [A1]

Month	Operating cash	Loan draw	Project spend	Debt service	Closing cash
Dec 2026	1,834.34	10,000.00	6,000.00	1,033.33	4,801.00
Jan 2027	1,334.34	0.00	4,000.00	1,016.67	1,118.67
Feb 2027	1,334.34	0.00	0.00	1,000.00	1,453.01
Mar 2027	1,334.34	0.00	0.00	983.33	1,804.01
Apr 2027	1,334.34	0.00	0.00	966.67	2,171.68
May 2027	1,334.34	0.00	0.00	950.00	2,556.02
Jun 2027	1,334.34	0.00	0.00	933.33	2,957.02
Jul 2027	1,334.34	0.00	0.00	916.67	3,374.69
Aug 2027	1,334.34	0.00	0.00	900.00	3,809.02
Sep 2027	1,334.34	0.00	0.00	883.33	4,260.03
Oct 2027	1,334.34	0.00	0.00	866.67	4,727.69
Nov 2027	1,334.34	0.00	0.00	850.00	5,212.03

Operating cash is after the above replenishment, costs and reserve, before new project spending and loan service. Closing cash includes loan proceeds and is not profit. Unspent project allocations must remain reserved. Monthly calculations use unrounded values. [A1]

Repayment capacity and downside

Case after January opening	Cash before debt	Coverage of US$1,033 first-payment benchmark
Base assumptions	1,334.34	1.29x
Sales 15% lower at 50% margin	414.19	0.40x
Margin 45% at baseline sales	720.90	0.70x
Sales down 15% and margin 45%	-107.23	-0.10x

Coverage here means modelled cash before debt divided by the first monthly loan payment, used consistently as a conservative comparison. It is not a historical debt-service coverage ratio or BancABC covenant. The base case depends on the cost limits, zero drawings and absence of other debt. The downside cases cannot support the same instalments without additional verified cash or a revised structure. [A1]

Price sensitivity and repayment boundary

Assumed annual rate	First payment	Total interest over 12 months
18%	983.33	975.00
24%	1,033.33	1,300.00
30%	1,083.33	1,625.00

At the base 24% illustrative rate, total interest is US$1,300 before fees. With US$4,800 monthly costs and reserve after opening and a 50% cash margin, existing-shop collections before recorded sales tax must be at least US$11,666.67 to meet the first-payment benchmark. A self-imposed 1.25x planning buffer requires US$12,183.33 monthly collections. The baseline of US$12,268.67 is only modestly above that buffer. These thresholds are planning tests, not bank criteria. [A1]

Recommended structure and fallback

Request one US$10,000 working capital approval with two monitored allocations. Discuss staged releases to reduce interest on unused funds, subject to bank availability. The displayed schedule conservatively charges interest on a full December draw. Agree whether tender receipts permit or require early repayment, and obtain the applicable charge in writing.

If the tender is not awarded, do not draw its allocation. If the verified cost budget or liabilities fail the repayment test, revise the stock rollout, evidence an owner contribution or discuss a smaller eligible facility with the bank. The published business-loan minimum is US$10,000, so a smaller request may need a different product. A longer tenor is an alternative to discuss, not an assumed working capital entitlement. [B1, B2]

Submission requirements and next steps

BancABC publishes business-loan requirements covering operating history, cash flow, financial records, security and an established account relationship. Its working capital offering describes facilities up to 12 months. Product eligibility and final conditions should be confirmed directly with the bank. [B1, B2]

Priority	Item to complete	Evidence required
1	Borrower identity and bank relationship	Registration, KYC, owners and signatories; proof shops belong to or support borrower; BancABC account tenure.
1	Tender facts and economics	Government entity, tender reference, award or order, contract price, quotations, delivery acceptance and payment schedule.
1	Final US$10,000 allocation	Confirm tender/stock split; add finance fees, bid/performance security, setup costs and source of any shortfall.
1	Cash flow and financial reconciliation	Bank and mobile-money statements; latest management accounts; stock counts and purchase costs; tax, payroll, drawings, debt and central Operations reconciliation.
1	Security and liabilities	Owners' assets and liabilities; existing debt terms; title and value of proposed security, subject to bank assessment.
2	New shop execution	Location, lease, January launch schedule, stock list, staffing and actual operating budget.
2	Trading history and approvals	Evidence of at least 12 months operating history; financial history requested by bank; authority to borrow and signed application.

Published business-loan criteria include more than 12 months of operation, more than six months as a BancABC account holder, a minimum US$10,000 request, financial information no older than 12 months, a business plan and at least a 12-month cash-flow forecast. The bank asks for financial history, ordinarily three years, and owners' asset/liability and security details. Confirm eligibility or any exception before treating the timetable as achievable. [B1]

Proposed timetable

September–October 2026: complete legal, financial and tender evidence; obtain supplier quotations and bank terms. November: secure facility approval and agree draw conditions before placing funded orders. December: execute awarded tender and procure shop stock to meet supplier lead times. January 2027: begin new-shop trading and monthly bank reporting. The December draw in the model must be moved earlier if procurement requires it.

Sources and calculation notes

M1 Management instructions

Conversation dated 15 September 2026: borrower name Inventivee Harvest; US$10,000 request; government Christmas-decoration tender in December; new-shop stock and January 2027 opening. Award status and contract terms not provided.

S1 Nirvana transaction extract

Read-only extraction at 2026-09-15T09:49:00.646Z. Tables: shops, sales and ledger_entries; shop IDs kipasa and dubdub; dates from 1 September 2025 to before 16 September 2026. Monthly analysis groups transaction date strings and excludes deleted_at records. Supporting file: source_extract.json; analysis uses March–August 2026. Date-boundary and cash reconciliation should be confirmed by the accountant.

S2 Existing financial reports

reports/may_june_accurate_financials.json and scripts/generate_may_june_accurate_financials.js. These legacy POS-only reports are not adopted as audited or complete financial statements. The new sales extract ties to the four May–June gross sales figures to rounding precision.

S3 Operations reconciliation

reports/dubdub_operations_use_of_funds_jan_to_jul_31_2026.json, generated 31 July 2026. Pooled Operations uses are not uniquely attributable to Dub Dub. No transfer total is treated as new income or unencumbered cash.

A1 Planning model

Analyst assumptions, not lender terms or management-approved forecasts. Existing net sales = US$73,612.03 / 6 = US$12,268.6717 monthly. Cash margin 50%; existing costs US$4,000; tax/maintenance reserve US$300; new-shop costs US$500 from January; owner drawings zero. Principal = US$10,000 / 12; interest = opening monthly principal balance × annual rate / 12. Closing cash = opening cash + collections − replenishment − costs − reserve + draw − project spend − principal − interest. No tender receipts or new-shop sales are included.
